## 2. Citations and explanations (Rule 70.7)

## 1. Reference is made to the following documents:

D1: CH 351 726 A (ORTEX S A) 31 January 1961;

D2: DE 36 32 688 C (MESSERSCHMIDT WILFRIED)

## 2. Document D1, which is considered to be the prior art closest to the subject matter of claim 1, describes (figures 1-2):

a device for adjusting the grinding of a condiment in a mill that consists of a drive element including:

PCT/FR2004/001896Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

(5) provided with an adjustment stop (15,  
16) causes the translation of the part  
supporting said vessel (10).

It follows that the subject matter of claim 1  
differs from this known device in that:

- said translation is restricted by both the abutment and a reinforcement that is positioned on the external top surface of said vessel-supporting part.

3. As a result, the subject matter of claim 1 is novel (PCT Article 33(2)).

The problem that the present invention is intended to solve can therefore be considered to be that of preventing said device from being accidentally dismantled.

4. The solution to this problem, as proposed in claim 1 of the present application, is considered to involve an inventive step (PCT Article 33(3)) because none of the cited documents describes or suggests the use of a reinforcement positioned on the external top surface of the vessel-supporting part in order to solve the stated problem.

5. Claims 2-12 are dependent on claim 1 and, as such, therefore also fulfil the PCT requirements of novelty and inventive step.
